

*CropLife International is the global voice and leading advocate for the plant science industry. We champion the role of agricultural innovations in crop protection and plant biotechnology to address some of the world's biggest challenges, such as food security, climate change, and biodiversity. We represent six of the world's leading multinational R&D companies in the plant science sector: BASF, Bayer, Corteva, FMC, Sumitomo, and Syngenta.*

*At the foundation of a sustainable, equitable, healthy, and prosperous world, we need an agriculture sector that is empowered to deliver positive change for people and the planet. Farmers must have access to the technologies, tools, and knowledge they need to make a difference.*

*Our purpose is to advance innovation in agriculture for a sustainable future. In support of this vision, we work to promote and protect **responsible innovation** and technologies that help address some of the world's biggest challenges. We advocate for science and risk-based **regulatory frameworks** around the world that help accelerate the transition to more sustainable food systems. We champion a more predictable and open **global trade environment** and standards to enhance the availability and trade in food. We work with our members to promote effective **stewardship** around the world and bring about positive change at farm level. All this work to champion innovation, better regulation, free trade policies, and stewardship form part of our plan to **lead sustainability through innovation**.*

*We support best practices in crop production using a range of technologies and innovations including seeds improved through plant breeding techniques like gene editing and plant biotechnology, pesticides, biologicals, seed treatments, and emerging and evolving digital technologies. Innovations in plant biotechnology include the development of seeds and crops more resilient to pests and the effects of climate change.*
